# POLICY ON VERBAL ORDERS

## VERBAL ORDERS:

- In case of inpatients, in emergency situations if the doctor gives any verbal orders or telephonic orders regarding medicines to be administered to a particular patient.
- The individual accepting the verbal order shall record and then read back the order in its entirety to the prescribing physician at the time the order is given, documenting that the order was "read back" (RB).
- Nursing staff shall tag all verbal orders with a "SIGN HERE & DATE" tag to alert the physician of the need to sign the verbal order upon return to the unit.
- Nursing staff are permitted to act upon verbal orders provided the orders contain the appropriate information.
- Verbal and telephone orders shall be signed or initialed by the prescribing practitioner as soon as possible, not later than 24 hours.
- When the ordering physician is unavailable, it is acceptable for another team member or the attending staff to authenticate the verbal order.
- Whenever there is doubt regarding a particular prescription (such as illegible handwriting, wrongly written strength/dose or frequency, doubt regarding similar sounding medicines, duplication etc.) or when a prescription is incomplete (without sign, date, etc), the pharmacist should promptly call the doctor and inform him and get it corrected without causing inconvenience for the patient.
- The attending nurse shall remind the treating doctor about the patient's known drug allergies as marked with red ink on the patient's file so that the patient does not receive that drug.

## POLICY ON VERBAL ORDERS

### HIGH-RISK MEDICATION:

To identify potential high risk medications and to outline steps to prevent errors that may result from confusion of these medications.

Circumstances Increasing Errors in High Risk Medications: Poorly handwritten medication orders.

### Verbal directions/orders.

- Similar product packaging.
- Similar medication name.
- Improper packaging leading to improper route of administration.
- Storage of products with similar names in the same location.
- Similar abbreviations. Improper storage of concentrated electrolytes

### Strategies to Avoid Errors Involving High Risk Medications:

Medication arrangement: Avoid storing look-alike, sound-alike drugs next to each other (example: instead of storing by generic name (e.g. vincristine and vinblastine) store drugs by brand name (e.g. Oncovin and Velban). Limit high risk drug storage.

- Formulary selection: Minimize look-alike, sound-alike formulary combinations.
- Prior verification: As an additional precaution, high risk medication orders are
- verified prior to dispensing
