

2.3.5. The teaching learning process of the institution nurtures creativity, analytical skills and innovation among students

Creativity in nursing education is an essential competence in fostering nursing learners; as both creative and critical thinking skills are needed to identify issues and create critical solutions to improve learners cognitive attributes and reflection and engagement in learning by developing assessment strategies and inspiring internal motivation for lifelong learning during various teaching activities. Therefore, nursing programmes must prepare nurses who can successfully perform in an environment that demands innovative problem-solving. Creativity and innovation are considered important measures of core competence for students of all levels, including nursing students. Integrating creativity with interdisciplinary teaching modules could increase creativity for nursing students, however, this has not been empirically determined. Various competitions like rangoli, fruit and vegetable carving are hosted in the institution which stimulates the creativity among the students. Preparation of charts and models by group of students on various topics are given and the same is displayed in the laboratories. Role plays are performed by students on various health issues to create awareness among public is also a technique adopted to kindle creativity.

All the programs require the use of analytical skills. The nursing process application to care for any patient and through case studies and clinical presentation, they apply the analytical skill to find the problem and solution using scientific rationale and apply in practice. Students are given opportunities to do poster and scientific paper presentation in the conference. Quiz competition is conducted once a month in all subjects where all students get a prospect to play a part. Capstone project again gives a challenging task where students find the resolution for the issue. Research project bestow the students to use the methodical way of elucidating responses to the research problems.

Innovation is act of constructive thinking, grouping knowledge, skill, attitude in to new original and rational ideas like...critical thinking – Imagination – plan – Action – Achieve. As health care technology advances and patients require more care, nurses will need to be prepared to change old and incorporate new care practices and systems. Nurses must be able to deliver quality nursing care, but will also need to be capable of creating innovative approaches, reacting quickly, and taking calculated risks. Though innovation is an inherent nursing skill, it will take a coordinated effort to begin to fully infuse innovation methodologies. This institute provides more opportunity to our students to explore and express their innovation by encouraging model preparation and poster preparation.

BRICS method has adopted to prepare lesson plan which helps to enlighten the students knowledge.
